

## **MALARKEY EXPANDS LOW SLOPE ROOFING PRODUCT LINE**

PORTLAND, Oregon – April 24, 2014 – Malarkey Roofing Products expanded their low slope product line in April to meet the growing requirements of roofing specifications. The expansion of the bituminous systems offered by Malarkey now includes three additional roll products to the newly rebranded Paragon® low slope roofing product line.

The new additions to the Paragon® line of products include torch grade Paragon® Ultra TG Base and Paragon® Ultra TG Cap, as well as the highly reflective Paragon® RCap™ SBS cap sheet. All Paragon® branded products are styrene-butadiene-styrene (SBS) modified to meet the needs of a high-performance built-up roofing system. SBS modified products absorb thermal shock and movement allowing the products to perform in all climates. For over 30 years, Malarkey has been the leader in the SBS modified low slope roofing industry with SBS modified base and cap sheets.

The expanded line of bituminous systems manufactured by Malarkey offers a more diverse product portfolio to broaden their reach in the low slope market. These new product additions come on the heels of the promotion of Joseph (Joe) Russo to the newly created National Commercial Sales Manager position, with additional low slope products to be released later this year.

Malarkey offers SBS modified and conventional bituminous low slope roofing systems, as well as steep slope asphalt roofing systems. For more information on Malarkey Roofing Products, or to find a representative, call 800.545.1191 or visit [WWW.MALARKEYROOFING.COM](http://WWW.MALARKEYROOFING.COM).
