FOR IMMEDIATE RELEASE

MALARKEY ROOFING PRODUCTS RELEASES TWO NEW HIGH-PROFILE SHINGLES

PORTLAND, Oregon – June 14, 2016 – Malarkey Roofing Products is scheduled to release the new Legacy[®] XL and Windsor[®] XL high-profile shingles in June. The new heavyweight shingles offer a more pronounced design on the roof, while maintaining the fortified durability of their original shingle lines.

The Legacy[®] shingle was introduced in 1997 as the first laminate shingle in North America to utilize durable SBS polymer modified asphalt, now known as Flexor[®]. The Legacy[®] XL high-profile design continues that tradition of Flexor[®] durability to promote superior granule adhesion and Class 4 impact resistance, as well as Scotchgard[™] Protector from 3M for added protection against black streaks caused by algae.

The Windsor[®] shingle was introduced in 2014 as the first designer shingle line from Malarkey. The Windsor[®] was created in a joint effort with contractors to offer the look of a traditional cedar shake roof with an ease of installation. The new Windsor[®] XL will carry those features into a high-profile design. As with the original shingle design, the Windsor[®] XL will feature durable Flexor[®] polymer modified asphalt to promote superior granule adhesion and Class 4 impact resistance, as well as Scotchgard[™] Protector from 3M for added protection against black streaks caused by algae.
