NO-SMELL ASPHALT

WWW.MALARKEYROOFING.COM

Malarkey Roofing is proud to offer No-Smell Asphalt

Advanced asphalt technology takes the asphalt smell out of the kettle and off the roof!

Sell the quality of Multi-ply and Composite Systems to schools and hospitals without odor worries.

HOW IT WORKS

Malarkey Roofing Products® is a proud provider of No-Smell Asphalt. Unlike cheap imitations, No-Smell Asphalt does not contain a masking agent. Its proprietary Xyclene™ formula is a true odor suppressant – making the asphalt smell virtually undetectable to the installation crew, building occupants, and neighbors. Xyclene™ acts at the molecular level to consume and retard the release of specific odor-causing compounds.

Its unique formula encapsulates asphaltenes, stopping the evaporation of lighter petroleum molecules and eliminating odor fumes. *It is the best solution to asphalt roofing odors at the kettle, and more importantly, on the roof.*

ODOR-FREE INSTALLATION

No-Smell Asphalt enables contractors to schedule odor-sensitive jobs during business hours, such as hospital and/or school projects, keeping overtime costs to a minimum and customers satisfied. Asphalt is an ideal roofing adhesive and waterproofing material, but its smell often invokes a negative reaction.

No-Smell Asphalt changes the perception of asphaltic multi-ply from a reputation of strong, unpleasant smells to a more modern, virtually odor-free installation. No-Smell Asphalt comes ready to use. It is factory-mixed to assure maximum effectiveness and eliminates messy or dangerous additives from being introduced to the kettle.

- ☘ Reduce odor complaints
- ☘ Eliminates scheduling hassles
- ☘ Meets or exceeds ASTM D312
- ☘ Available in convenient melt packs
- ☘ Better yields, proven performance
- ☘ Ready to use
